📄 AI & Data Science – Assignment 5

Total Marks: 20

Question 1 (3 Marks)

Create a public GitHub repository named:
IYF Capstone Project.
Then invite me (https://github.com/Top-G-420) as a collaborator

---

Question 2 (3 Marks)

Create a professional **README.md** file that includes:

- **Project Title:** The name of the project at the top of the file.
- **Short Description:** A brief summary of what the project does.
- **Purpose of the Project:** Why the project was built and what problem it solves.
- **Tech Stack (React, Supabase, Hugging Face):** The main technologies used and their roles.
- **Key Features:** The main functions or capabilities of the app.
- **Installation / Setup Steps:** Clear instructions on how to install and set up the project locally.
- **Required Environment Variables:** List of needed `.env` variables (e.g., API keys, URLs).
- **How to Run the Project:** The command(s) to start the app.
- **Contribution Guidelines:** How others can contribute (fork, branch, pull request process).

Question 3 (2 Marks)

Inside your project, create a folder named:

prompts

Create a detailed **prompt.md** inside this folder that includes:

- **Project Goal (one clear sentence):** What the app should do in a single simple statement.
- **Target Users:** Who will use the app (e.g., students, customers, admins).
- **Main Features:** The key functions the app must have.
- **Pages / Layout:** The screens needed (e.g., Home, Login, Dashboard) and basic structure.
- **UI Style Requirements:** How it should look (modern, clean, responsive, dark mode, etc.).
- **State Management Needs:** How data should be handled (simple state, Context API, etc.).
- **Authentication Needs:** Whether users must sign up, log in, or have roles.
- **Design Constraints:** Any rules like mobile-first, use React only, no backend, etc.

This prompt will be used to build the project.

Question 4 (1 Mark)

Create a **Supabase** account using the same email as your GitHub account.

Question 5 (1 Mark)

Create a **Hugging Face** account using the same email as your GitHub account.

Question 6 (1 Mark)

Create a **Vercel** account and connect it to your GitHub.

Question 8 (6 Marks – MOST IMPORTANT)

Sign up using this mandatory link:
👉 https://lovable.dev/invite/SD3CBEY

 You MUST use this link.

Use it to:

- Build the full website
- Use your prompt
- Create a complete working project

Question 9 (1 Mark)

Copy and paste the provided project prompt into Lovable, generate the full website from it, and ensure all features are implemented correctly. After the site is successfully created, click **Publish** and deploy the project so it is live.

Question 10 (2 Marks)

Push your complete project to GitHub

Important Instructions

- Use **Wednesday class** to help each other complete the project.
- On **Saturday**, every student must come with Fully working live demo.
